The genes were isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (antiagonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, croth's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischammiae.

                                                                                                                                                                                                                                                                                                                                                                                                                        B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention provides nucleic acids encoding Arabidopsis plastidic CC acetyl COA synthetase (ACS), various subunits (specifically the E3 CC subunit) of plant plastidic pyruvate dehydrogenase (pPDH), the A and B subunits of a plant ATP citrate lyase (ACL), Arabidopsis pyruvate decarboxylase (PDC), Arabidopsis aldehyde dehydrogenase (ALDH), specifically ALDH-2 and ALDH-4. The polypeptides can be expressed by specifically ALDH-2 and ALDH-4. The polypeptides can be expressed by standard recombinant methodology. The ACS, pPDH, ACL, PDC and ALDH CC polypeptides, methods and nucleic acid molecules of the invention are CC used to alter the level of acetyl COA is explant or plant cell, tissues CC or organs. A decrease in acetyl COA is expected to affect the biosynthesis of very long chain fatty acids and flavonoids. The enzymes me used to produce acetyl COA phytochemicals (plastidic ACS, pDDH, ACL, CC pyruvate decarboxylase, acetyl COA phytochemicals (plastidic ACS, pDDH, ACL, CC dehydrogenase and aldehyde dehydrogenase are involved in the biosynthesis of acetyl COA.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              a fragment of the glyceraldehyde-3-phosphate-dehydrogenase (GAPDH) gene from Penicillium chrysogenum. A 2.2 kb fragment was identified (AAQ78277) and cloned in pUC18 to give pGT1. A 665 bp HindIII-HindII fragment of this was used to screen cosmid DNA to identify a DNA fragment (AAQ78279) containing the GAPDH promoter. A sequence (AAQ78278) encoding the GAPDH gene (gpdA) was isolated from a cDNA library. The full sequence of the genomic gpdA structural gene is given in AAQ78280 and the corresponding protein sequence in AAR65965. The GAPDH promoter is useful for expressing foreign genes
           This invention describes novel human nucleic acid (cDNA) sequences () that are highly expressed in uterine tumour tissue and which have anticancer and cytostatic activity. (A) are used (1) for recombinant expression of polypeptides (B) and (ii) to isolate complete genes. (I are used (1) to identify agents suitable for treatment of uterine or endometrial cancer; (ii) directly for treating these forms of cancer (including expression from gene therapy vectors) and (iii) for generation of specific antibodies. (A) are identified by assembling I
                                                                                                                                                                                      and
                                                                                                                                                                                                   New nucleic acid sequences expressed in uterine cancer tissues, and derived polypeptides, for treatment of uterine and endometrial canc
                                                                                                                                                                                                                                                                                                                                                                                       17-APR-1998;

                                                                                                              sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Nakagawa
Tateishi
                 in the exemplification of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the
                                                                                       amino acids, nucleic acids, vitamins, saccharides and particularly L-lysine. The present sequence is a prote

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           C.
                                                                                                                                                  disease, sarcoidosis, sinusitis, purulent otitis media, erythema nodosum or pharyngitis. The polypeptides encoded by the open reading frames of the C. pneumoniae genome (see AAY34584-Y5879) can be used ir immunogenic compositions as vaccines. Vectors containing C. pneumoniae nucleotides sequences can also be used as immunogenic compositions, especially where the vector directs the expression of a neutralising
                                                                                                                                                                                                                             AAY34584-Y35879 represent the proteins encoded by all the open reading frames in the complete genome (see AAX91990) of Chlamydia pneumoniae. C. pneumoniae causes respiratory disease such as pneumonia and bronchitis and is thought to be a contributing factor in heart
                                                                                                                                                                                                                                                                                                                                                                             Griffais
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      13-SEP-1999
                                                                                                                                                                                                                                                                                                                       Genome sequence of Chlamydia pneumoniae
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Chlamydia pneumoniae
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Respiratory disease; pneumonia; bronchitis; heart disease; sarcoidosis; sinusitis; purulent otitis media; erythema nodosum; pharyngitis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence

AAQ15504). The enzyme encoded by the sequence has a CBD which is homologous to a terminal A region of T.reesei cellulase and is able to bind to insoluble (hemi)cellulosic substrates. See AAQ14838-Q14842.

Title:
Perfect score:
119
Sequence:
119
Scoring table:
BLOSUM62
Gapop 10.0, Gapext 0.5

Searched:
100059 seqs, 36664827 residues

Perfamum DB seq length: 0
Maximum DB seq length: 2000000000

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Post-processing: Minimum Match 0% Maximum Match 100% Listing first 45 summaries

Bacteriol: 173:989-996(1991).

FUNCTION: PRODUCTION OF EXTRACELLULAR GLUCANS, THAT ARE THOUGHT TO PLAY A KEY ROLE IN THE DEVELOPMENT OF THE DENTAL PLAQUE BECAUSE OF THEIR ABILITY TO ADHERE TO SMOOTH SURFACES AND MEDIATE THE AGGREGATION OF BACTERIAL CELLS AND FOOD DEBRIS.

CATALYTIC ACTIVITY: SUCROSE + (1,6-ALPHA-D-GLUCOSYL)(N) = D-FRUCTOSE + (1,6-ALPHA-D-GLUCOSYL)(N+1).
                                                                                                                                                                                                                                                                                                                                         D-FRUCTOSE + (1,5-ALFIN, 2-1)

FUNCTION: PRODUCTION OF EXTRACELLULAR GLUCANS, THAT ARE THOUGHT TO PLAY A KEY ROLE IN THE DEVELOPMENT OF THE DENTAL PLAQUE BECAUSE OF THEIR ABILITY TO ADHERE TO SMOOTH SURFACES AND MEDIATE THE AGGREGATION OF BACTERIAL CELLS AND FOOD DEBRIS.

CATALYTIC ACTIVITY: SUCROSE + (1,6-ALPHA-D-GLUCOSYL)(N) = D-FRUCTOSE + (1,6-ALPHA-D-GLUCOSYL)(N+1).

ENZYME REGULATION: GLUCAN SYNTHESIS BY GTF-S IS INDEPENDENT OF PRIMER GLUCAN UNLIKE GTF-I.
                                                                                                                                                                                                                         1,6-GLUCOSE).

CATALYTIC ACTIVITY: SUCROSE + (1,6-ALPHA-D-GLUCOSYL)(N) = D-FRUCTOSE + (1,6-ALPHA-D-GLUCOSYL)(N+1).

SUBCELLULAR LOCATION: SECRETED.

DISEASE: DENTIAL CARLES.

                                                                                                                                                                               -:- CATALTRIC ACTIVITY: RELEASE OF ANY N-TERMINAL AMINO ACID,
INCLUDING PROLINE, THAT IS LINKED WITH PROLINE, EVEN FROM A
DIPEPTIDE OR TRIPEPTIDE.
-:- COPACTOR: ZINC OR MANGANESE.
-:- SUBUNIT: HOMODIMER (BY SIMILARITY).
-:- WISCELLANEOUS: IN STREPTOMYCES LIVIDANS, THERE ARE TWO GENES
(PEPPI AND PEPP2) WHICH ENCODE AMINOPEPTIDASE P.
-:- SIMILARITY: BELONGS TO PEPTIDASE FAMILY M24B.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                              SPECIES-S.lividans; STRAIN-66;

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                         fructose is then isolated from the medium. Cosmetic products or foodstuffs containing alternan can be produced. Recombinant production alternan sucrase is advantageous as it provides a cost effective means producing fructose for high fructose containing syrups, production of which previously has been achieved by costly production from maize starch. This sequence represents the Leuconoston mesanternian alternation.
                                                                                                                                                                                                             gene is useful for the fermentative production of alternan (a carbohydrate) and/or fructose by secreting the enzyme into a saccharose-containing culture medium. Alternatively, the enzyme is contacted with a saccharose-containing solution. The alternan and/or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim la; Page

The DNA was obtd. by treating S. sobrinus 6715 with mutanolysin, extracting the chromosomal DNA, partially digesting with Sau3AI and fractionating on agarose gel. The 3-5 kbp fragment was ligated into pUC18 and E. coli JM109 transformed with it. A GT-I expressing clone was isolated and sequenced. The clone may be used in the development of a drug for

                                                                                                                              The sequence represents an alpha-D-glucosyltransferase from Streptococcus salivarius. The enzyme is primer independent, and produces soluble glucan from sucrose. A gene encoding the enzyme may be cloned and expressed in Escherichia coli using a subclone of phage lambda-Cl3, e.g. plasmid pGSG501 or plasmid pGSG502. The DNA may also be expressed in a transgenic plant, to improve the level of stored carbohydrate in a pasture plant which normally contains low levels, or to prevent degradation of stored carbohydrate during plant senescence. Dextran may be isolated from the plant, for use as a food binder or pharmaceutical additive. Primer independence ensures that the enzyme will be functional in plants. The glucan is poorly degraded in plants but easily degraded by bacteria in the rumer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Alpha-D-glucosyltransferase; primer independent; soluble gl

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Q
                                                                                                                                              The present sequence represents a Haemophilus influenzae adhesin (Hia) Crost protein from the non-typeable Haemophilus influenzae (NTH1) strain 12. His genes and proteins have antiinflammatory, auditory and antibacterial activities, and can be used in the production of a vaccine. An immunogenic composition comprising an Hia gene, a polypeptide encoded by an Hia gene, or a recombinant Hia polypeptide is useful for inducing protection against disease caused by Haemophilus strains in a susceptible host, preferably a human. An Hia protein is useful as an artigen, in immunogenic preparations including vaccines, as a carrier for other immunogenic preparations including vaccines, as a carrier is useful for treating diseases caused by the infection of Haemophilus Crompared to the low recovery of native protein from Haemophilus compared to the low recovery of native protein from Haemophilus confluenzae species. A truncated protein has a significantly higher amount of recovery than a full-length protein.

                                                                                                                                                                                                                                                                                                                                                                            This polypeptide comprises human telomerase RNA interactive protein-1 (TRIP1). Its amino acid sequence was deduced from CDNA clones (see AAV7865) obtained from a colon tumour cell line LIM1863 cDNA library. The invention relates to novel genes encoding components of the telomerase enzyme complex, including TRIP1 and telomerase protein 2 (TP2, see also AAW61349). These polypeptides may be useful as therapeutic agents in those cases where increasing TRIP1 activity or TP2 activity is desired, e.g. for treatment of HIV infection, AIDS and ageing disorders. In concert cells in which TRIP1 activity is to be decreased, such as in cancer cells in which TRIP1 activity and/or TP2 activity is to be decreased, such as in cancer cells in which TRIP1 activity and/or TP2 activity is to be decreased, such as in cancer cells in which TRIP1 activity and/or TP2 activity is to be decreased, such as in cancer cells in which TRIP1 activity and/or TP2 activity is to be decreased, such as in cancer cells in which TRIP1 activity and/or TP2 activity is to be decreased, such as in cancer cells in which TRIP1 activity and/or TP2 activity is to be decreased, such as in cancer cells in which TRIP1 activity and/or TP2 activity is to be decreased, such as in cancer cells in which TRIP1 activity and/or TP2 activity and to create antisense molecules, or DNA constructs may serve to disrupt or enhance TRIP1 and/or TP2 expression in cells, and to create dominant negative inhibitors of TRIP1 or TP2.
                                                                                                                                                                                                                                                                                  Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         partial protein. Inactivation of mitogen-activated protein kinase (MAP-kinase) is mediated by dephosphorylation at a dual phosphorylation motif by DSP which is referred to as MAP-kinase phosphatase. An agent that modulates DSP is useful for treating a disorder selected from Duchenne muscular dystrophy, cancer, graft-versus-host disease (GVHD), autolimmune diseases, allergies, metabolic diseases, abnormal cell growth, abnormal cell proliferation and cell cycle shoremalities.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   cell proliferation and cell cycle abnormalities. DSP is useful for identifying antibodies and other agents that inhibit DSP-12 and/or DSP-13 activity. DSP and the agents identified are useful for modulating cell proliferation, differentiation and survival. DSP is useful in screening assays for modulators of enzyme activity and substrate binding and for dephosphorylating a substrate of DSP-12 or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New isolated dual-specificity phosphatase polypeptide for treating cancer, graft-versus-host disease, autoimmune diseases, allergies, metabolic diseases, abnormal cell growth and abnormal cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     03-AUG-1993
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AAR40918 standard; Protein;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Soxco
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Qу
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match
                                                      The present sequence is human dual-specificity phosphatase (DSP)-12 protein. Inactivation of mitogen-activated protein kinase (MAP-kinase) is mediated by dephosphorylation at a dual phosphorylation motif by DSP which is referred to as MAP-kinase phosphatase. An agent that modulates DSP is useful for treating a disorder selected from Duchenne muscular
                                                                                                                                                                   New isolated dual-specificity phosphatase polypeptide for treating cancer, graft-versus-host disease, autoimmune diseases, allergies, metabolic diseases, abnormal cell growth and abnormal cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human; dual-specificity phosphatase; DSP-12; dual phosphorylation motif; mitogen-activated protein kinase; MAP-kinase; graft-versus-host disease; GVHD; Duchenne muscular dystrophy; therapy; cancer; autoimmune disease; allergy; metabolic disease; cell growth; cell proliferation; cytostatic; cell cycle abnormality; cell differentiation; antiallergic; muscular;

   The present sequence is human dual-specificity phosphatase (DSP)-12 mutant protein, C253S. Inactivation of mitogen-activated protein kinase (MAP-kinase) is mediated by dephosphorylation at a dual phosphorylation motif by DSP which is referred to as MAP-kinase phosphatase. An agent that modulates DSP is useful for treating a disorder selected from Duchenne muscular dystrophy, cancer, graft-versus-host disease (GVHD), autoimmune diseases, allergies, metabolic diseases, abnormal cell growth, abnormal cell proliferation and cell cycle abnormalities. DSP is useful for identifying antibodies and other agents that inhibit DSP-12 and/or DSP-13 activity. DSP and the agents identified are useful for modulating cell proliferation, differentiation and survival. DSP is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  modulating cell proliferation, differentiation and survival. DSP useful in screening assays for modulators of enzyme activity and substrate binding and for dephosphorylating a substrate of DSP-12 DSP-13.
                                                                                                                                                                                                                                       New isolated dual-specificity phosphatase polypeptide for treating cancer, graft-versus-host disease, autoimmune diseases, allergies, metabolic diseases, abnormal cell growth and abnormal cell

The present amino acid sequence is human SGPO06 phosphatase polypeptide. This sequence is classified as dual specificity phosphatase (DSP) and MAP transportation and man man screen to chromosomal contribution.
                                                                                                                                                                                                                                                                                                                                           03-SEP-1997;
20-JUN-1997;
22-JUL-1997;
        This sequence represents a Borrelia burgdorferi (Bb) protein of the invention, which is suitable for use in a vaccine. The Bb polypeptic can be used in vaccines for eliciting protective antibodies to membe the Borrelia genus, particularly for the use against Lyme disease in humans and animals. They can be used for preventing or attenuating a infection caused by a member of the Borrelia genus. The products car be used for detection of members of the Borrelia genus.
                                                                                                                            Claim 12;
                                                                                                                                                     products for the diagnosis, prevention and treatment caused by Borrelia, particularly Lyme disease

                                                                                                                                                                                                                      This sequence represents Heliothis armigera entomopoxvirus (HaEPV) DNA polymerase. The invention relates to infectious, spindle body-producing entomopox viruses which have heterologous DNA inserted in a 771 bp intergenic region between the fusolin and p68 genes. Recombinant viruses containing heterologous DNA encoding an insecticidal protein may be used for the control of insect pests. Alternatively, viruses containing sequences encoding therapeutically useful proteins such as interferon, human growth hormone or insulin may be used for recombinant production of these proteins.
